

Beginner—yellow trail

This trail is designed with the new rider in mind. The trails on this route are well groomed and most of the riding is done lake to lake with short connectors in between to minimize the chances of a rider being lost. There is ample gas and dining options along this loop. The west end of Piseco Lake, the ride can experience some nicely groomed tree lined trails, small bridges, rolling hill and some great views. With a lunch stop this loop should take about 3 to 3 1/2 hours to complete.

1/2 day— Red

You can do this loop from many locations, but we started at the ball field in Speculator. This trail has a variety of riding .From the ballfield, you will go north in to the Perkins Clearing Area. This part of the loop has groomed dirt roads where you can go as fast of slow as you like, it also affords some great scenic vistas. Once through the Perkins Clearing section you will head south through some tight windy trails leading you to the north side of Oxbow Lake. Across this small lake is a gas pump if you need to fill up before heading south to Salisbury. There are two trails leading to Salisbury. One is Powley Road which is a wide groomed dirt road, the other trail is a windy trail through the hills and trees. We suggest taking one trail down and the other one back. Then back to Oxbow lake and lake to lake back to your starting point. This loop should take about 5 or so hours with stops for gas and food.

Full Day—Orange

The orange trail is for those who really want to get in as much riding as they possible can in one day. This loop starts in Speculator at the Ballfield, goes up to Perkins Clearing for some groomed wide trail riding, then west to Piseco on some Windy trails, over to Oxbow Lake to top off your tank if needed, then you through the hills and trees to Powley Road for a fast trip down to Salisbury and up to Ohio for some great grub and gas (remember there is no gas until Oxbow Lake). Back in to the woods heading east to Morehouse where they usually have more snow than anyone else! Then Lake to Lake for a quick ride back. This Ride should take about 7 hours with gas and a meal stop.
